The *Infectious and Tropical Medicine* journal continues to serve as a vital platform for the dissemination of high-quality research focused on infectious diseases and public health challenges, particularly those affecting tropical and subtropical regions. Our mission is to bridge clinical science, epidemiological insights, and global health interventions to inform evidence-based practices and policies worldwide.

In recent months, the journal has seen a notable increase in submissions addressing vector-borne illnesses, antimicrobial resistance, emerging viral threats, and vaccine efficacy. We are particularly encouraged by the growing number of contributions from researchers in endemic areas, whose firsthand data and observations offer critical perspectives on disease prevention and control.

We remain committed to maintaining rigorous peer-review standards, fostering timely publication, and ensuring open access to scientific knowledge. Through our continuous publication model and special thematic issues, we aim to highlight urgent public health concerns and innovative responses across disciplines.

On behalf of the editorial board, we extend our gratitude to our authors, reviewers, and readers for their ongoing contributions and support. Together, we strive to advance scientific inquiry and improve health outcomes in the face of global infectious disease threats.
